

FOR IMMEDIATE RELEASE

CALIFORNIA NATURAL GAS VEHICLE PARTNERSHIP TO HOST THE NATIONAL BIOMETHANE SUMMIT IN SACRAMENTO JUNE 23, 2009

SANTA MONICA, CA--April 22, 2009, The National Biomethane Summit, a new event within the Low Carbon Fuels Conference Series, will be taking place at the Sheraton Grand Sacramento Hotel, Sacramento, California on June 23, 2009. Hosted by the California Natural Gas Vehicle Partnership, this innovative and ground-breaking summit will showcase the availability and potential of Biomethane as a sustainable and renewable source of low carbon fuel for transportation and power generation. This one-day event will offer a full day's focus on applications, equipment, and emerging technologies in the sciences of Landfill Gas, Dairy Waste Methane Recovery, and Wastewater Treatment.

The goal of the National Biomethane Summit is to showcase the technologies, equipment, policies, actions, and other ongoing efforts that will enable California to meet its goals to reduce Greenhouse Gas emissions, strengthen transportation fuel supplies, and establish a long-term sustainable market for Biomethane. The conference also aims to further educate those working on new plans and policies for the implementation of AB32 and the increased use of alternative low carbon fuels. In order to develop the most effective and successful programs, it is imperative that legislators and staff are aware and have the most current and best information on this transportation fuel option. Providing this information and gathering key stakeholders for a day of detailed discussion and networking is a key focus of this conference.

The June 23, 2009 summit expects to draw over 200 attendees including elected officials, government agencies, industry end-users, facility owners and operators, funding providers, technology providers, educators, researchers, regional planners, non-government organizations and carbon trading experts.

For more information on this event or to register, please visit www.biomethanesummit.com, call 800.993.0302, or send an email to info@biomethanesummit.com.

About The California Natural Gas Vehicle Partnership (CNGVP):

The California Natural Gas Vehicle Partnership (CNGVP) is an alliance of air quality, transportation and energy agencies, vehicle and engine manufacturers, fuel providers, transit and refuse hauler associations, and other stakeholders interested in increasing and strengthening the deployment of low-emission natural gas vehicles throughout California. Through the CNGVP's efforts in California, the organization has helped to deliver the promise of clean transportation by promoting the research and development, demonstration and deployment, accessibility and commercializing, and legislative support for natural gas vehicles. The success of these efforts in California has served as a model for low-emission, alternative fuel initiatives in other states across the country and around the globe. Additional information about the CNGVP is available on the web at www.cngvp.org.
